Flue gas treatment downstream incinerators for heat and power generation
LUEHR FILTER offers the know-how gathered from more than 75 years practical experience. In the course of these years we have installed plants for air pollution control for different applications in nearly all industrial fields all over the world. All plants are characterised by

- the reliable observance of the corresponding requested emission limit values, i.e. for particulate, acid crude gases such as HF, HCl, SO₂, dioxins / furans as well as heavy metals such as Hg and Hg-compounds.
- a reliable continuous operation at lower maintenance.
- low operating costs.

Below please find, as representatives for a large number of installed projects, some references for the fields of application

- Incinerators for domestic waste
- Incinerators for RDF (Refuse Derived Fuel)
- Incinerators for residual- and waste wood as well as natural biomass
- Incinerators for paper- and sewage sludge
- Incinerators for hospital waste and crematories
- Incinerators for further fuels
